

MAHRM AI

Forward Deployed Engineering, Exported from Qatar

Proposal to Startup Qatar (QDB) — START Track

Founder: Al Hasanat Rasul Mujahid Bin Mumtaz · October 2026

mahrmai.com · github.com/hasanatrasul · linkedin.com/in/al-hasanat-r-a410829

The Opportunity

A scarce, high-value role meets a national priority

- The Forward Deployed Engineer (FDE) is the decisive role in applied AI — the engineer who ships solutions with the client.
- This talent is globally scarce and highly paid.
- Qatar is investing in AI, fintech and 'smart everything' — but sovereign AI delivery is thin and largely foreign-supplied.
- The opportunity: build an FDE engine in Qatar, serve institutions, and export it to earn foreign exchange.

The Idea — A Forward Deployed Engineering Export Engine

Serve Qatar first, then export the capability

1 • Serve Qatar

Embed FDE teams with Qatari government, finance and justice to deliver sovereign AI.

2 • Export

Place teams with clients abroad; repatriate hard currency to Qatar.

3 • Productise

Reusable platforms become licensed B2G/B2B SaaS.

4 • Grow Talent

A Qatar FDE academy builds exportable local talent.

The foreign-exchange component grows every year as the export share rises.

Why Qatar

Aligned with national priorities and Vision 2030

- Foreign-exchange earnings — a non-hydrocarbon services export.
- Talent & knowledge economy — a local FDE academy.
- Sector fit — AI, FinTech / RegTech, EdTech, 'Smart Everything'.
- Vision 2030 — diversification and institutional capability.
- Sovereign & ethical AI — auditable, regionally-built alternatives.

The Founder — Not an Ordinary AI Graduate

Strategic leadership, institution-building, international standing

- Strategic leadership — founded and led (Acting Director General) a national agency.
- Institution-builder — established labs at NAB and the NFA, and the STEM Careers Programme (HEC & PIEAS).
- Internationally trained, incl. law-enforcement — Amped (IT), Foster & Freeman (UK), JCLEC/UNODC.
- Global representation — led national teams to the Science Olympiads in Iran, India & Japan.
- M.Sc. AI (Sweden, Distinction) — a national leader who codes, with a STEM-alumni talent network to recruit from.

Evidence of Capability

Proven leader of teams — and builder in isolation

Led confidential national solutions

Under my supervision, specialist teams delivered confidential national systems — fingerprint forensics, questioned-signature analysis, and Smart Court integration (police ↔ labs).

Not public — proof of leading forward-deployed engineering at national scale.

Builds complete systems solo

Public at github.com/hasanatrasul: a forensic LIMS pilot (Next.js / TypeScript / Prisma), two OSINT engines, an education platform and a marketplace.

Capability samples — not the commercial product.

Generative AI — Built End-to-End

Breadth across AI modalities: text, code, audio and video

First AI-designed music video

My first fully AI-made music video — lyrics, music and visuals all designed with AI, end to end. A hands-on demonstration of generative-AI fluency beyond systems engineering.

Watch the sample

youtu.be/k65LSxTmIHA

- AI-written lyrics
- AI-composed music
- AI-generated visuals

Business Model

Three reinforcing revenue lines

FDE Services

Delivery sold in Qatar and exported abroad to earn foreign exchange.

Productised IP (SaaS)

Reusable platforms and tools licensed B2G / B2B.

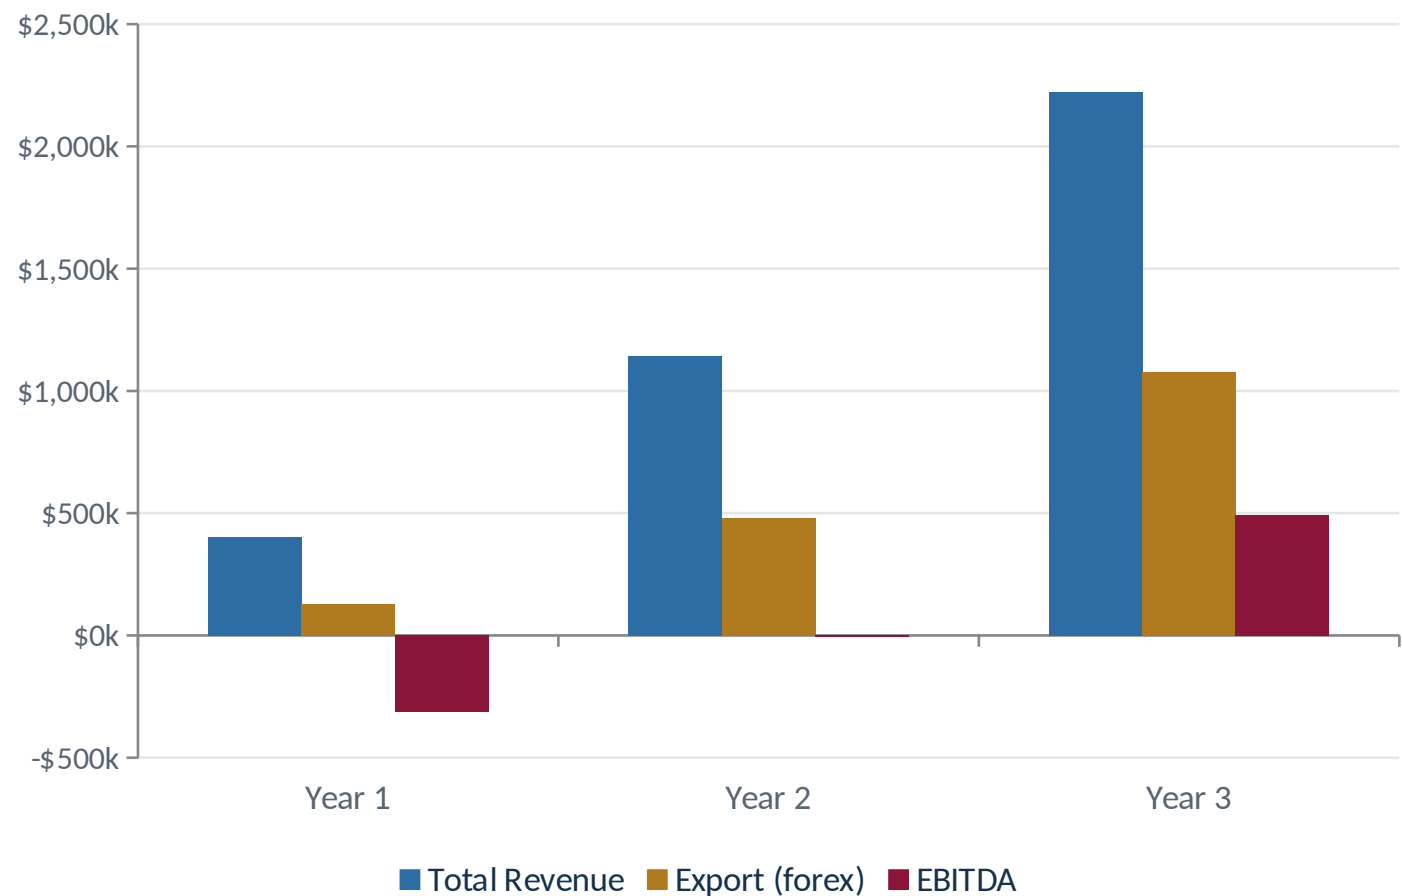

Training & Capability

Developing FDE and AI talent — a 20-year founder record.

Customers: government, regulators, banks, law firms and enterprises — in Qatar and abroad.

Indicative Financials

3-year illustrative projection (USD, to be substantiated)

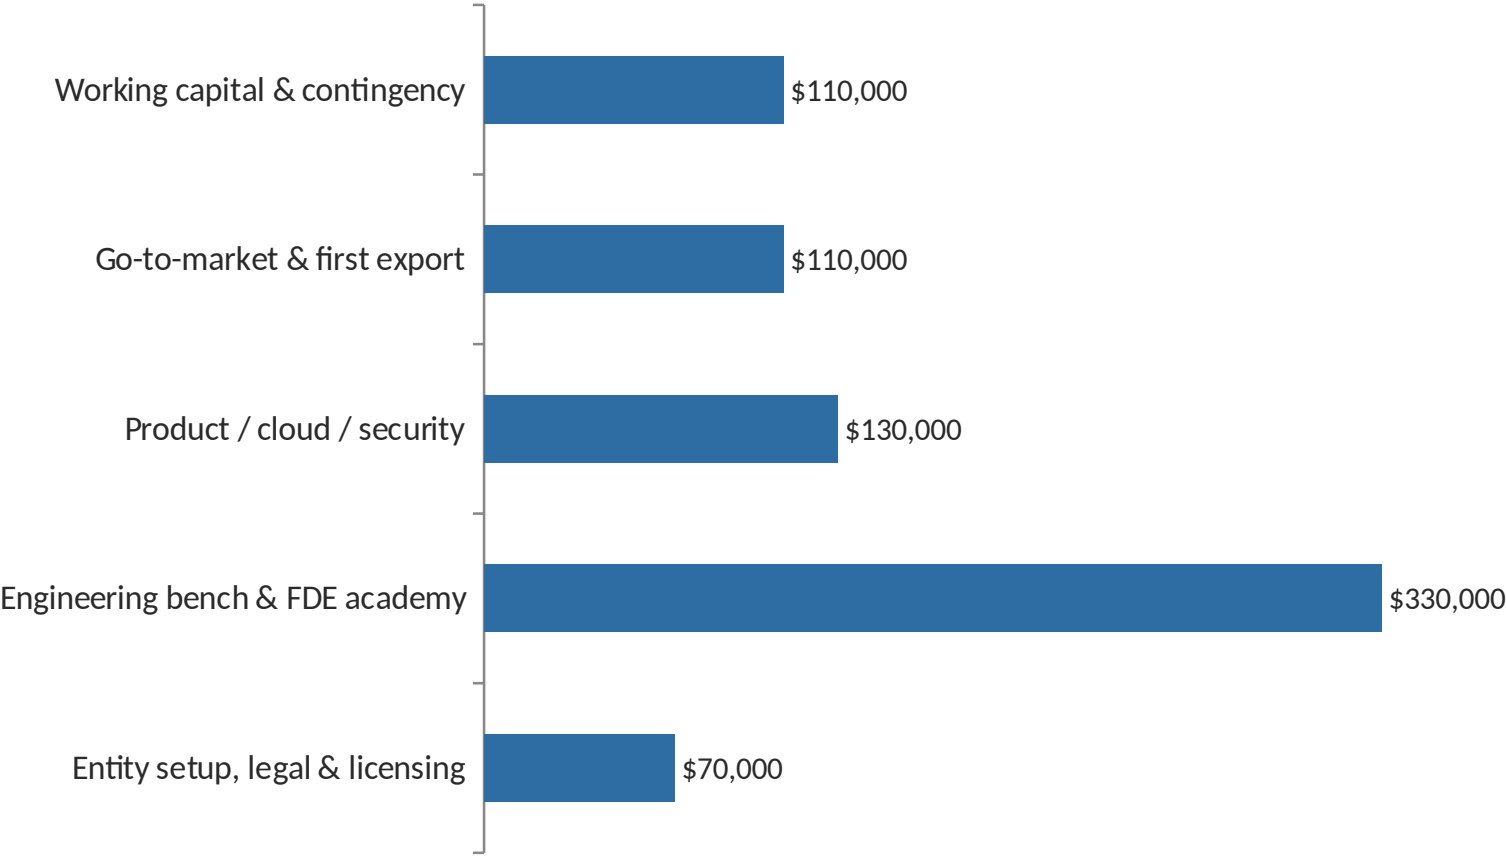

The story

- Y1: investment year (START-funded)
- Y2: approaches break-even
- Y3: EBITDA ≈ \$0.49M (~22%)
- Export/forex: \$0.13M → \$1.08M (≈32%→49% of revenue)

Full model attached — editable and recalculating.

Use of START Investment

Indicative allocation of US\$750,000 (ceiling US\$1.1M)

Why this mix

Most funds the first FDE cohort and academy — the engine of the business.

The rest establishes the Qatar entity, hardens accelerators, and wins the first Qatar and export deals.

Company Status & Commitment

Full transparency

- MAHRM AI is at proposal stage and not yet registered.
- The founder is a serving government employee and has not set up a private company while in public service.
- On selection, the founder will resign with proper due notice, then incorporate MAHRM AI in Qatar.
- Stepping away from a senior, highly-paid national role signals real conviction and long-term commitment.

The Ask

Acceptance into the Startup Qatar START track, with:

- Investment of US\$750,000 (within the US\$1.1M ceiling)
- Incubation and establishment support in Qatar
- Introductions to Qatari institutions for first deployments

In return: a Qatar-headquartered company creating skilled local jobs, earning foreign exchange, and building sovereign, trustworthy AI.
